

Year End Capital Campaign

“Where there’s muck there’s brass!!”

If you have ever watched Mike Rowe and the excellent series ‘Dirty Jobs’, you will know the true meaning of that phrase!

Those of us who work in the business of collecting, treating and repurposing human waste TRULY know the meaning of ‘muck’ BUT also that it is an honorable profession that is unlikely to ever be replaced by AI!!

WasteWater Education 501(c)3 has a simple basic purpose - to educate the public and their elected officials, as well as train, on line, service providers and installers, that onsite, decentralized water resource systems WORK!

We are impartial, independent and promote the technology, the science, and the professionalism of the onsite industry.

Our philosophy is simple - too much money is squandered on mega projects that will prove exorbitantly expensive to repair and replace in the future - when sea level rises and natural weather related events overwhelm central infrastructure.

And NO we do not advocate the wholesale dismantling of centralized systems - that would be technically impossible! What we DO propose is rethinking the plumbing to make all water resource reuse systems more cost effective, sustainable and resilient to the inevitable events of the next 25 years.

WasteWater Education 501(c)3 has a simple request - if you agree, we need your help.

Each year providing sophisticated inter active training costs increase.

We need to keep pace and our rising attendance figures and client feedback show how much our personal approach is appreciated!

*“My God I NEVER expected a **real person** to answer the phone! How refreshing to work with someone who knows the business, knows what I need and fixed it there and then! THANK YOU!”*

We are looking for a ‘Dirty Dozen’ - 12 More brass than muck supporters to help us stay on target for FY 26-27? Is that you?

If so - check out our Supporters Button on WasteWaterEducation.org or via this QR Code - and thank you!
